

Cayman Roden

AI Engineer | Production LLM systems, evals and agent security | Python, FastAPI

310-982-0492 | caymanroden@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Open to full-time AI Engineer roles, US remote

Professional Summary

AI engineer who builds production LLM systems and the evals and guardrails that make them safe to ship. Paid deliveries in document extraction (DocExtract) and bilingual SMS lead qualification (Acuity Real Estate; client-reported 500+ inbound leads). Builds evals that run as CI checks, and publishes pre-registered research on prompt injection through agent tool output.

Technical Skills

LLM applications: Claude, OpenAI API, Gemini, RAG, pgvector, MCP, tool calling, structured outputs, prompt caching

Evaluation and safety: pytest, offline fixture replays as CI checks, adversarial and prompt-injection sets, LLM-as-judge, pre-registered experiments

Backend and delivery: Python, FastAPI, PostgreSQL, Redis/ARQ, Pydantic, Docker, GitHub Actions, OpenTelemetry, GoHighLevel

Experience

AI Engineer (Contract) | DocExtract (confidential client) | Remote, US | 2026

- Built a FastAPI document-extraction service: two-pass Claude extraction with confidence-gated correction, Pydantic-validated output, PostgreSQL/pgvector retrieval with agentic RAG, and Redis/ARQ background jobs.
- Made extraction quality a CI check: PRs that touch prompts or the extractor re-score 28 committed prediction fixtures and fail below a 0.85 floor or on a drop of more than 0.03 from baseline. Replay score: 95.5% weighted field-level score, not live-model or production accuracy; prompt and model changes go through a separate paid live eval.
- Added prompt-injection defenses (fencing, scanning, output sanitization) on the text and vision extraction paths, with adversarial tests. Wrote a 200-case golden and adversarial authoring corpus.

AI Engineer (Contract) | Acuity Real Estate | Remote, US | January 2026 to March 2026

- Shipped a Claude-powered SMS lead-qualification system with Spanish detection and bilingual human handoff, using FastAPI webhooks, Redis deduplication and per-contact locking, and GoHighLevel CRM updates. Client-reported 500+ inbound leads.
- Scoped a thin first slice (intake bot only) with broker-defined qualification rules, acceptance criteria and a kill-check to pause expansion if CRM writes or Spanish handoffs failed.
- Directed AI-assisted delivery, including a handoff-monitoring query fix with a regression test. Delivered a runbook, evaluation fixtures and 1,700+ tests at handoff (historical figure).

AI Engineer (Contract) | EnterpriseHub (confidential client) | Remote, US | 2025 to 2026

- Worked on a FastAPI platform for CRM automation, model routing and bot handoffs using AI-assisted development.
- Project scope included evaluation checks and operational monitoring; the demonstration uses replayed data.

Freelance AI & Automation Consultant | Cayman Roden Consulting | 2023 to Present

Independent practice serving small businesses and real-estate clients, including the contracts above.

- Built AI chatbot and website-assistant integrations with custom instructions and client-document knowledge bases; automated workflows with Zapier and n8n across CRM, forms, and email.
- Cleaned and standardized CRM datasets (dedupe, formatting, validation); built dashboards and automated reporting pipelines on live client data.

Selected Projects

ai-redteam-notes: Pre-registered research on indirect prompt injection through agent tool output. On Groq-hosted Llama-3.3-70B (n=10 per cell), a content-trust prompt scaffold stopped two payload families but failed 10 of 10 against a third. Recommends typed tool-call dispatch (not yet measured at 70B); a dependency-free substrate auditor's checks run in CI; falsified hypotheses are published.

mcp-server-toolkit: Python library of opt-in decorators that wrap MCP tools with JWT/JWKS auth, a sqlglot read-only SQL allowlist, caching, per-caller rate limits and OpenTelemetry. 627 collected tests.

llm-reviewer-path: Runnable offline code sample covering eval gates, approval-bound writes and idempotent retries. 36 offline tests, no API key required.

cmux workflow: Created an AI-assisted workflow coordinating models across interfaces for parallel tasks, with shared memory, a source of truth and Beads task tracking.

Earlier Experience

Assistant Administrative Clerk | Ecoff Law | Beverly Hills, CA | 2012 to 2014

- Created and maintained a records index and filing system covering on-site and Iron Mountain storage; provided reception coverage.

Additional customer service and sales: Dave & Buster's (Barback, approx. 2025 to 2026), Honey's Kettle and Kenter Canyon Farms.
