

Cayman Roden | AI Engineer

Cayman Roden

AI Engineer | Python, FastAPI, LLM/RAG applications, agents, evaluation

310-982-0492 | caymanroden@gmail.com | linkedin.com/in/caymanroden | github.com/ChunkyTortoise | chunkytortoise.github.io | Remote, US-based

Professional Summary

Contract AI engineer building LLM applications with Python and FastAPI. Delivered bilingual SMS qualification for 500+ inbound leads; additional paid work includes document extraction and AI applications. Experience spans retrieval-augmented generation (RAG), tool use, offline evaluation, CRM integration, and human handoff.

Technical Skills

Backend / data: Python, FastAPI, PostgreSQL, Redis, ARQ, SQLAlchemy, Pydantic, pytest, Docker, GitHub Actions

LLM applications: Claude API, OpenAI API, Gemini, RAG, embeddings, pgvector, MCP, tool calling, structured outputs, JWT, sqlglot

Evaluation / delivery: golden datasets, adversarial evaluation, OpenTelemetry, human handoff

Experience

AI Engineer (Contract) | Acuity Real Estate | Remote, US | January 2026 to March 2026

github.com/ChunkyTortoise/jorge_real_estate_bots

- Built and shipped a Claude-powered English/Spanish SMS qualification system that processed 500+ inbound leads, integrating FastAPI webhooks, Redis deduplication and per-contact locking, and GoHighLevel CRM updates.
- Worked with the broker to define qualification and escalation rules; implemented intake, buyer, and seller workflows with routing, rate limiting, and human handoff.
- Delivered a runbook, golden and adversarial fixtures, and 1,700+ tests at handoff; audited 226 existing GoHighLevel workflows.

AI Engineer (Contract) | DocExtract (confidential client) | Remote, US | 2026

github.com/ChunkyTortoise/docextract

- Built a FastAPI document-extraction service using Pydantic contracts, two-pass Claude tool calling, PostgreSQL/pgvector retrieval, and Redis/ARQ background processing.
- Measured 95.5% weighted field-level accuracy on a 28-case offline replay; maintained a separate 202-case evaluation corpus (151 golden, 51 adversarial) and an 80% CI coverage gate.

AI Engineer (Contract) | EnterpriseHub (confidential client) | Remote, US | 2025 to 2026

Replay demo: enterprisehub-demo.vercel.app

- Completed AI application contract work on EnterpriseHub for a confidential client. Public demonstration uses replayed data.

Selected Projects

llm-reviewer-path | github.com/ChunkyTortoise/llm-reviewer-path

- Cloneable evaluation and agent-control examples covering eval gates, approval-token checks for consequential actions, retrieval failures, and delivery scoping; runs locally without API keys.

mcp-server-toolkit | github.com/ChunkyTortoise/mcp-server-toolkit

- Python MCP framework with JWT/JWKS authentication, SQL validation for read-only queries, structured tool outputs, caching, and OpenTelemetry cost attribution.
- Includes a 30-case adversarial corpus. Supported source installation and verification instructions are on GitHub.

Earlier Experience

Customer service, sales, and bookkeeping | Los Angeles and Palm Springs, CA | 2010 to 2024
