

Cayman Roden

Applied AI Engineer | Python, FastAPI, LLM/RAG applications, agents, evaluation

310-982-0492 | caymanroden@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

US-based | Open to US remote and LA-area hybrid | Contract-first; open to full-time

Professional Summary

Applied AI engineer delivering document extraction and CRM automation for paying clients. Defines requirements, directs AI-assisted implementation and checks delivery against agreed workflows. Work includes evaluation, monitoring and human handoff; Acuity Real Estate reports 500+ inbound leads (client-reported).

Technical Skills

Backend / data: Python, FastAPI, APIs/webhooks, PostgreSQL, Redis, Pydantic

LLM applications: Claude, OpenAI API, Gemini, RAG, pgvector, MCP, tool calling, structured outputs

Evaluation / delivery: pytest, adversarial evaluation, Docker, GitHub Actions, GoHighLevel, human handoff

Experience

AI Engineer (Contract) | **DocExtract (confidential client)** | Remote, US | 2026

- Delivered a FastAPI document-extraction service with Pydantic contracts, two-pass Claude tool calling, PostgreSQL/pgvector retrieval, and Redis/ARQ background jobs for a paid client engagement.
- Added an offline evaluation check using 28 saved-output fixtures: 95.5% weighted field-level accuracy on replay, not live-model or production accuracy. Separate golden and adversarial datasets contain 200 cases.

AI Engineer (Contract) | **Acuity Real Estate** | Remote, US | January 2026 to March 2026

- Shipped a Claude-powered SMS qualification system with Spanish detection and bilingual human handoff. Integrated FastAPI webhooks, Redis deduplication and per-contact locking, and GoHighLevel CRM updates.
- Defined qualification and escalation rules with the broker, kept GoHighLevel as the system of record, and specified Spanish-message detection and human handoff.
- Directed AI-assisted delivery, including a handoff-monitoring query correction and regression test. Delivered a runbook, evaluation fixtures and 1,700+ tests at handoff.

AI Engineer (Contract) | **EnterpriseHub (confidential client)** | Remote, US | 2025 to 2026

- Worked on a FastAPI platform for CRM automation, model routing and bot handoffs using AI-assisted development.
- Project scope included evaluation checks and operational monitoring; the demonstration uses replayed data.

Freelance AI & Automation Consultant | **Cayman Roden Consulting** | 2023 to Present

Independent practice serving small businesses and real-estate clients, including the contracts above.

- Built AI chatbot and website-assistant integrations with custom instructions and client-document knowledge bases; automated workflows with Zapier and n8n across CRM, forms, and email.
- Cleaned and standardized CRM datasets (dedupe, formatting, validation); built dashboards and automated reporting pipelines on live client data.

Selected Independent Projects

llm-reviewer-path: Offline examples for evaluation gates, approval-token isolation, retrieval failures and delivery scoping, with 19 tests and no API key required.

mcp-server-toolkit: Python toolkit with JWT/JWKS authentication, SQL validation, structured outputs, caching and OpenTelemetry.

cmux workflow: Created an AI-assisted workflow coordinating models across interfaces for parallel tasks, with shared memory, a source of truth and Beads task tracking.

Earlier Experience

Assistant Administrative Clerk | Ecoff Law | Beverly Hills, CA | 2012 to 2014

- Created and maintained a records index and filing system covering on-site and Iron Mountain storage; provided reception coverage.

Additional customer service and sales: Dave & Buster's (Barback, approx. 2025 to 2026), Honey's Kettle and Kenter Canyon Farms.
